

2013 F=ma Exam: Problem 24

Kevin S. Huang

From the previous problem, we found the spring constant is

$$k = \frac{8mg}{H}$$

We are given the maximum tension in the cord is

$$T = kh = 4mg$$

so

$$h = \frac{4mg}{k} = \frac{4mg}{8mg/H} = \frac{H}{2}$$

Thus, the answer is A.
