

2016 F=ma Exam: Problem 6

Kevin S. Huang

From the previous problem, we found that (in the box frame) the particle behaves as a projectile with gravity g_{eff} pointing in the lower left direction.

For a projectile to return to its starting position, it must be launched in the opposite direction to gravity. The particle travels in a straight line to the peak “height” and then comes back down. Thus, the answer is A.
