

2017 F=ma Exam: Problem 10

Kevin S. Huang

We can obtain the pressure at the bottom of the jug either going from the jug opening (at atmospheric pressure P_0) or the plug (sealed so no air pressure) to the bottom:

$$P_b = P_0 + \rho g H = \rho g h$$

The gauge pressure goes not include P_0 so

$$P_{b,\text{gauge}} = \rho g H = \rho g h - P_0$$

Thus, the answer is B.
