

2021 F=ma Exam: Problem 17

Kevin S. Huang

Since all 3 points are undergoing uniform circular motion, their acceleration is given by $a = \omega^2 r$. We have

$$a_A = \omega^2 R$$

$$a_B = \omega^2 (R/2)$$

$$a_C = (2\omega)^2 (R/2) = 2\omega^2 R$$

so $a_B < a_A < a_C$ and the answer is C.
