

2022A F=ma Exam: Problem 7

Kevin S. Huang

Since the scaling on the y-axis is exponential, we can rescale to uniform spacing by taking the logarithm of y and plotting $\log y$ against x .

The graph shows a linear relationship:

$$\log y = -mx + b$$

$$y = e^{-mx+b}$$

which is of the form

$$y = Ae^{-Bx}$$

so the answer is E.
